The screenshot shows the MyCoPortal homepage with a banner image of a large orange mushroom. The navigation bar includes links for Home, Explore, Crowdsource, Checklist Projects, Other Resources, and Acknowledgements. A "Log In" link is also present. The main content area features a "Welcome to the Mycology Collections data Portal" message. Below this, there's a "Fungus of the Day" section with a photograph of two Morchella mushrooms and a detailed specimen label from the Field Museum of Natural History. To the right, a "News and Events" box lists several updates, including NSF grants and new data integrations.

The Consortium will digitize specimen descriptions, illustrations and annotation notes for more than 1.2 million North American microfungi specimens.

38 institutions in 31 states to digitize their microfungi records

1,223,370 specimens to digitize. Geo-reference
~113,000 existing records. By September 2018.

Skeletal records -> Transcribing
-> Geo-referencing

Welcome to the Mycology Collections data Portal

The Mycology Collections data Portal (MyCoPortal) is more than just a web site - it is a suite of user-friendly, web-based data access technologies to aid taxonomists, field biologists, ecologists, educators, and citizen scientists in the study of fungal diversity. The data are derived from a network of universities, botanical gardens, museums, and agencies that provide taxonomic, environmental, and specimen-based information. Using the Symbiota (<http://symbiota.org>) system of virtual online floras, these data are directly accessible to dynamically generate geo-referenced species checklists, distribution maps, and interactive identification keys, all linked with a rich collection of digital imagery documenting fungal diversity of North America.

Fungus of the Day

Morchella angusticeps

News and Events

- NSF Press Release (#15-092) - NSF awards fifth round of grants to enhance America's biodiversity collections
- NSF Press Release (#12-082) - US National Science Foundation awards support for the Mycology Collection Consortium, a collaboration of 35 institutions in 24 states for the purpose of databasing some 1.4 million dried specimens in the field of macrofungi (NSF ADBC 1206197).
- December 2013 - 1,546,358 occurrence records supplied by 31 different data providers have been integrated into MyCoPortal.
- NEW - MiCC records are now included in Zooniverse project Notes from Nature. Please help us by transcribing specimen labels (link).
- Image provided by New York Botanical Garden.
