

International Whole-Drawer Digitization Interest Group

Devoted to resources and discussion
for whole-drawer and bulk imaging of
dried, pinned insect collection
drawers and related bulk specimen
containers

A world map with a blue grid background. The map is rendered in a light blue color. Several green circular markers are placed on the map, indicating locations in North America, Europe, and Australia. A semi-transparent green rectangular box is overlaid on the map, containing text.

Participants connect for the purpose of sharing techniques, strategies, uses, improvements, and technology associated with producing a single image of an entire collection drawer.

Remote
annotation

Handling continually
changing drawer
configurations

Cost to
digitise

Equipment
configurations and
imaging techniques

Seeing,
extracting, and
recording
label data

Issues of Interest

Spacing within
drawers and trays

Identifiers and
barcodes

Inventory
management

Soups and
drawer size
bulk samples

Image size and
management

Getting to
specimen
level

Challenges to Drawer Digitization...

Promote & encourage remote curation of unsorted specimens

Capture disappearing labels (pencil)

Expose soups, bycatch & bulk samples

Effective tool for rapid / mass digitization

Morphometric analysis

Facilitate effective Collection Management & Virtual Curation

Use current technology to put order into collections (further curation)

See, extract & record label data (Crowdsourcing)

Research at the computer

Assist with image & loan requests

Important specimens go undiscovered for many years

Creating Virtual Collections

Drawer-Imaging Systems

Microscope Bulk Imaging

Barcodes
