*Smithsonian Institution - US National Herbarium*

The United States National Herbarium (US) is housed in the National Museum of Natural History, Smithsonian Institution, located in Washington, DC. Many of the plant groups represented in the U.S. National Herbarium rank among the finest and/or largest in the world. The United States National Herbarium was founded in 1848, when the first collections were accessioned from the United States Exploring Expedition (50,000 specimens of 10,000 species). Current holdings total 5 million specimens, making this collection among the ten largest in the world representing about 8% of the plant collection resources of the United States. The herbarium is especially rich in type specimens (@110,000).

## DigiVol Lab:

Image 60000 specimens a year

## DigiVol Online:

Transcribe 30000 specimens a year

# Why do we need to make DigiVol more productive?

Crowdsourcing sites such as DigiVol have been remarkably productive but the task is huge.

Through DigiVol something like 60000 tasks are transcribed and validated per year, varying in complexity from simple labels with only a few words, through complex labels with georeferencing to double page field diaries with many hundreds of words per page.

Across the biodiversity sector we have a big job – 3 billion plus specimens depending on your size threshold.

# How to increase productivity?

- Increase overall numbers of volunteers
- AND/OR
- Increase the numbers of tasks completed by each volunteer

# How to increase overall numbers of volunteers?

## Attract more volunteers through marketing

Social media is useful but we need more

## WildCount overview

WildCount

It is easy to believe that common native animals like kangaroos, possums, lyrebirds and wombats will always be around. Is it possible that, despite being relatively common, they are in decline? WildCount aims to answer this question. WildCount is a 10-year fauna monitoring program that uses motion-sensitive digital cameras in 200 sites across 146 parks and reserves in eastern NSW. WildCount looks at trends in occurrence of animals at these sites, to understand if animals are in decline, increasing or stable.

# More volunteers AND more tasks per volunteer

## Structured volunteering

### Examples

onsite at the Museum – DigiVol Lab  
schools  
universities

offenders returning to the workforce  
work for the dole  
retirement villages

# More volunteers AND more tasks per volunteer

## Structured volunteering – what is required?

Structured volunteering ideally requires the following:

1. a lab or office like space that has computers with internet access
2. onsite training and training materials
3. onsite supervision by suitably trained coordinators
4. structured reward system with the institution involved such as
  - Educational/Vocational certificate for job seeking
  - Behind the scene tours
  - Video conference sessions with collection staff
