

# Challenges and Efficiencies of organizing an ADBC TCN project on Southeast Freshwater Macrofauna

Hank Bart

Tulane University Biodiversity Research Institute

[hbartjr@tulane.edu](mailto:hbartjr@tulane.edu)

# Proposed TCN Concept

- Organizing a TCN project on Freshwater Macrofauna of the Southeastern U.S.
- “Macrofauna” = retained on a 0.5mm sieve. (mollusks, decapod crustaceans, fishes).
- Research theme: impacts of river modification (channelization and impoundments) on diversity and complexity of macrofauna communities.
- TCN on aquatic insects led by Clemson (MOSAIC).

# Diverse SE Macrofauna Communities

# Aquatic Insects

# M.O.S.A.I.C.

- **Mobilizing the Organization of Southeastern Aquatic Insect Collections:** Freshwater Insects as Sentinels for Environmental Conditions.
- Aquatic insects are recognized throughout the world as a prognostic tool for the health of freshwater aquatic ecosystems
- Ephemeroptera, Plecoptera, and Trichoptera, (EPT, commonly known as mayflies, stoneflies, and caddisflies) exhibit a low threshold for pollution.
- Other aquatic insects groups (e.g., Diptera) exhibit high pollution thresholds.

# Stream Macrofauna Associations

- Stream insects and other invertebrates play an important role in mobilizing energy from allochthonous fixed carbon sources.
- Form complex associations and interdependencies with stream fishes and other vertebrates.

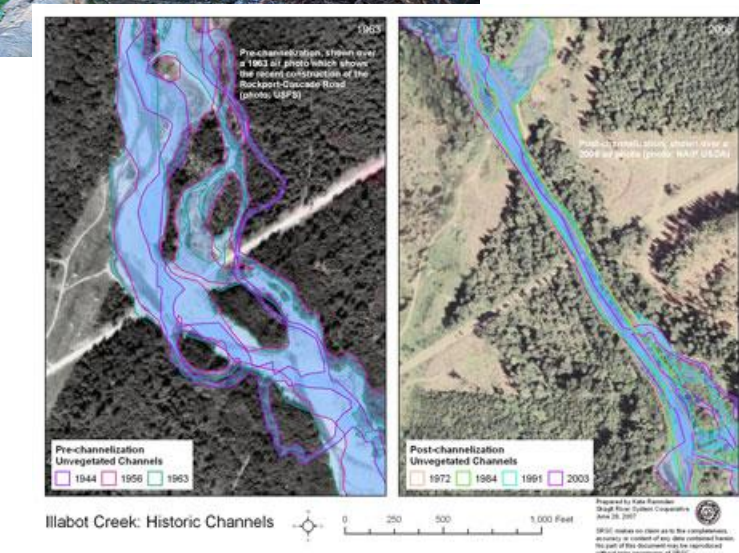

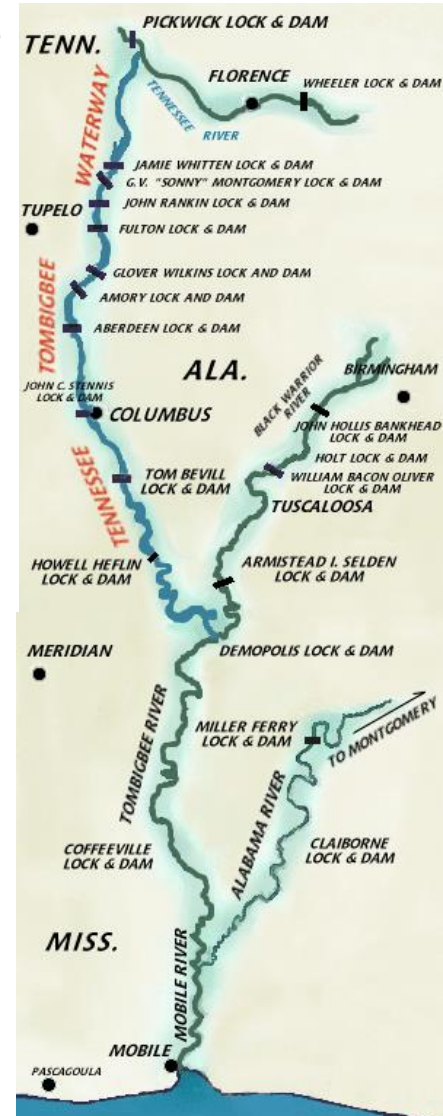

© M. C. Barnhart 2000

# Southeastern U.S.

- Freshwaters of the southeastern U.S. are the richest biologically in North America
- Regrettably, the Southeast has led the nation in lost wetland acreage to activities like agriculture, flood control and urban sprawl.
- Streams of the southeast are also among the most modified in the U.S...

# Stream Modification

# Environmental Sentinels

- The use of living organisms as sentinels has advantages over traditional chemical and microbial water-quality analyses.
- Freshwater organisms, such as fish and macroinvertebrates, live almost continuously in the water and respond to all environmental stressors.
- Populations, species and communities of these organisms severely impacted by environmental disturbance.

# Unified TCN Macrofauna Project

- **Mobilizing the Organization of Southeastern Aquatic Invertebrate Collections: Freshwater *Invertebrates* as Sentinels of Environmental Disturbance.**
- 33 institutions from 14 states.
- Study area covers all or parts of 18 states (Texas, Oklahoma, Louisiana, Arkansas, Mississippi, Tennessee, Alabama, Georgia, North Carolina, South Carolina, Florida, Virginia, West Virginia, Kentucky, Kansas, Missouri, Illinois, Indiana).

# Objectives

- Digitizing collections of freshwater invertebrates of the southeastern U.S.
- Integration of data across taxonomic groups to facilitate across-taxon studies of species associations, interdependencies, and correlated responses to instances of environmental disturbance and degradation.
- Take advantage of technological efficiencies of other biodiversity informatics projects.

# Participating Collections

15 participating collections housing 582,000 mollusk and decapod crustacean specimens.

Institution	Types of invertebrate collections	Specimens/Lots	SE %	% Databased	% Georeferenced	Internet Accessible?	Active curator
Appalachian State University	Mollusks, decapods	700 lots	90% or more	100%	15%	No	Soon
Auburn University	Mollusks, decapods	10,000 specimens	90% or more	100%	?	Yes	<b>Active</b>
Arkansas State University	Mollusks, decapods	6,000 specimens	90% or more	70%	50%	No	<b>Adjunct</b>
Delaware Museum of Natural History	Mollusks	30,000 specimens	50%	90%	0%	No	Active
Eastern Kentucky University	Mollusks, decapods	5,000 specimens	90% or more	?	?	No	Active
Florida Museum of Natural History	Mollusks	40,000 lots	90% or more	100%	100%	Yes	Active
Georgia Museum of Natural History	Mollusks, decapods	51,000 specimens	90% or more	50%	0%	No	Active
Georgia State University	Decapods	1500 lots	90% or more	?	?	No	Active
Illinois Natural History Survey	Mollusks	144,000 specimens	33%	100%	90%	Some	Active
Mississippi Museum of Natural Science	Mollusks, decapods	~140,000 specimens	90% or more	60%	60%	No	<b>Retiring</b>
North Carolina Museum of Natural Sciences	Mollusks, decapods	50,000 specimens	70% or more	100%	50%	Yes	<b>Mixed</b>
Ohio State University	Mollusks	740,000 specimens	33%	100%	95%	Yes	Active
University of Alabama	Mollusks, decapods	9,000 specimens	90% or more	100%	85%	No	<b>Searching</b>
Univ. of Tennessee (Frank McClung Museum)	Mollusks	50,000 specimens	85%	?	?	No	<b>Adjunct</b>
Texas Natural Science Center	Mollusks, decapods	12,000 specimens	70%	70%	90%	No	Acting

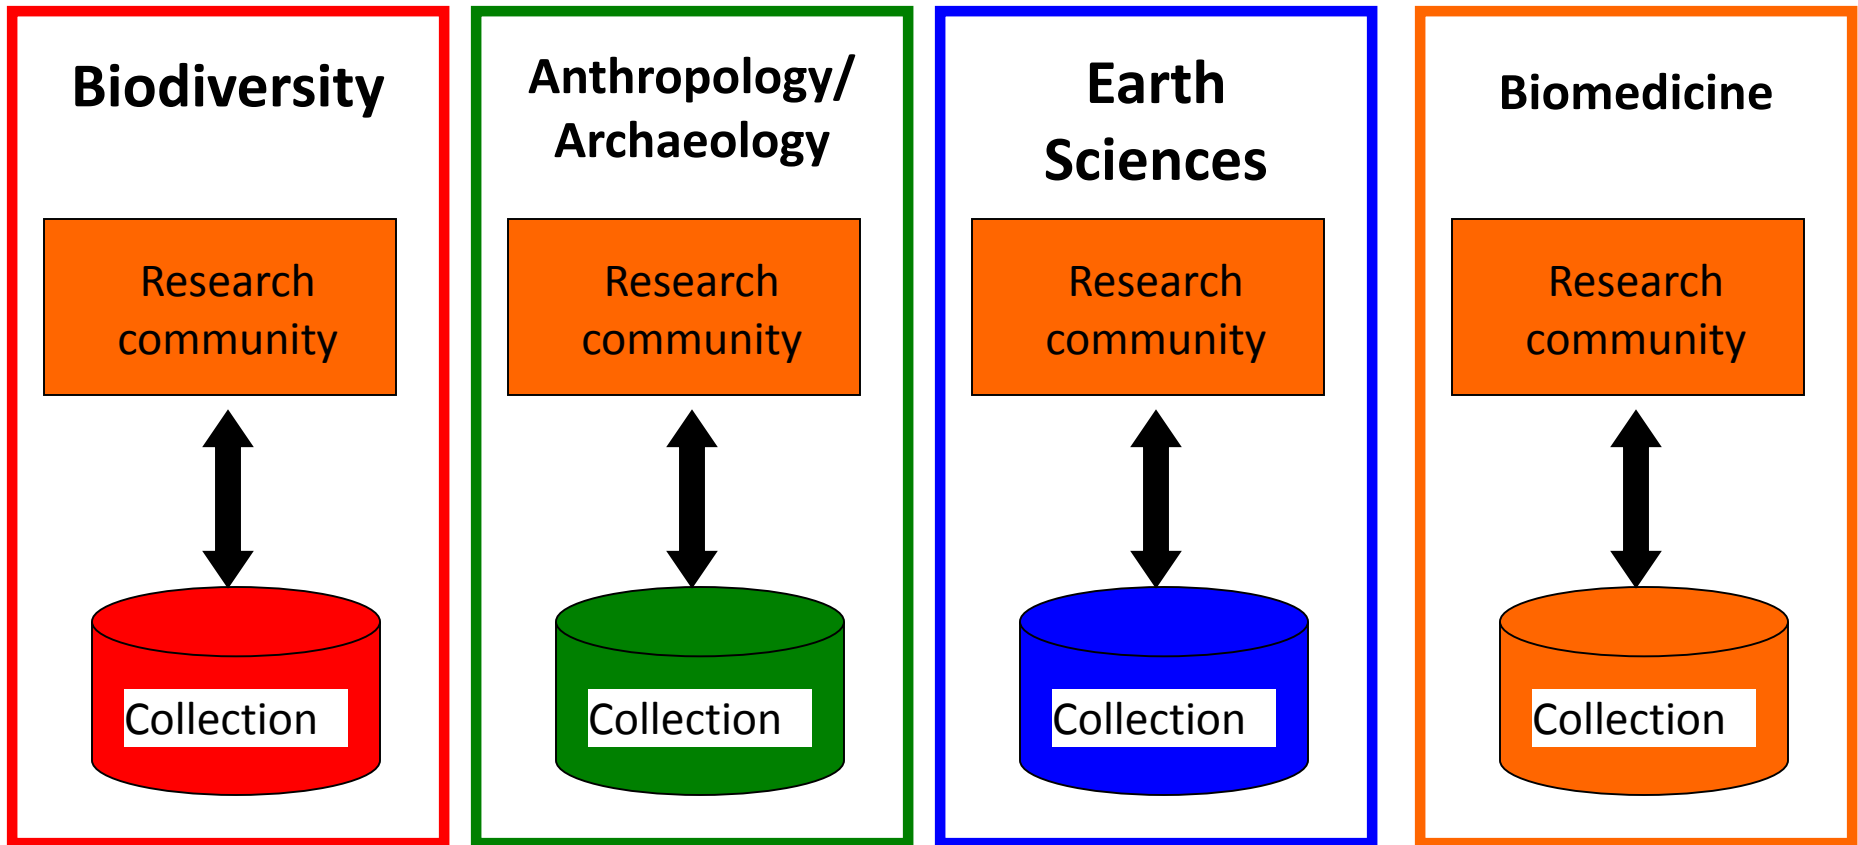

**MOSAIC Institutions, Taxa Covered and Number of Specimens:** (E,O,P,H,M,N,C,T,L,D = Ephemeroptera, Odonata, Plecoptera, aquatic Hemiptera, Megaloptera, aquatic Neuroptera, aquatic Coleoptera, Trichoptera, aquatic Lepidoptera, and aquatic Diptera, respectively)

Institution	Taxa Covered	Number of Specimens
Alabama Dept. of Environmental Management	E, O, P, H, M, N, C, T, L, D	937
Alabama Museum of Natural History (University of Alabama)	E, O, P, H, M, C, T, D	9,463
Clemson University	E, O, P, H, M, N, C, T, L, D	498,155
Florida A&M University	E, O, P, H, M, C, T, D	34,650
Florida Dept. of Environmental Protection (Includes SBIO Database)	E, O, P, H, M, N, C, T, L, D	4,000
Florida State Collection of Arthropods	E, O, P, C, T	215,880
Georgia Department of Natural Resources, Environmental Protection Division	E, O, P, H, M, N, C, T, L, D	5,962
Illinois Natural History Survey	E, O, P, H, M, C, T	157,710
International Odonata Research Institute	O	187,000
Kentucky Department of Environmental Protection	E, O, P, T, D	537
Mississippi Department of Environmental Quality	E, O, P, H, M, N, C, T, L, D	668
Mississippi State University (MEC)	E, O, P, H, M, N, C, T, D	42,094
North Carolina Dept. of Environmental and Natural Resources, Division of Water Quality	E, O, P, H, M, N, C, T, L, D	1,250,998
North Carolina State University	E, O, P, H, M, N, C, T, L, D	64,713

Tennessee Department of Environment & Conservation	E, O, P, H, M, N, C, T, L, D	5,832
University of Georgia	E, O, P, H, M, N, C, T, D	103,032
University of Kentucky	E, P, T, D	3,850
University of Tennessee (Includes Etnier Collection)	O, C, T, D	97,056
US National Museum of Natural History (Database**)	E, O, P, H, M, N, C, T, L, D	133,576
<b>TOTAL</b>		<b>3,099,220</b>

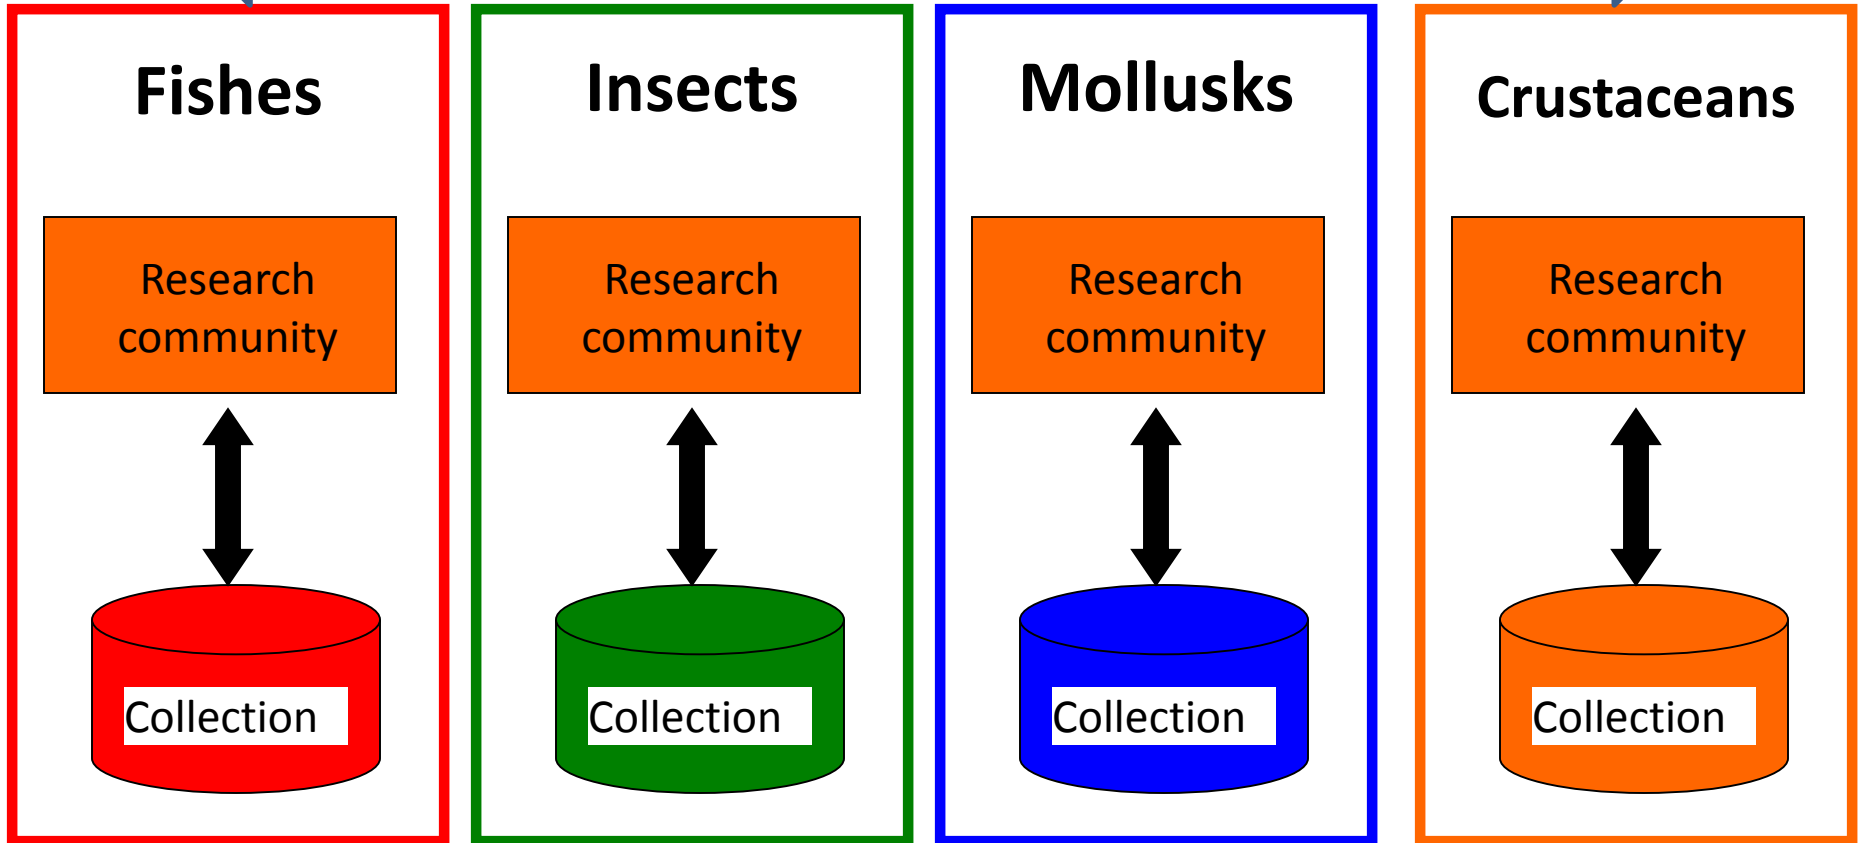

# Issues

- Mixes of dry shells and fluid-preserved soft tissues; specimens and lots; jars and vials; sometimes ledgers, sometimes not.
- Maintaining healthy southeastern collections
  - Restoring curators to orphaned collections
  - Increasing institutional appreciation/support for collections.

# 'Stove-piped' Collections and Research Programs

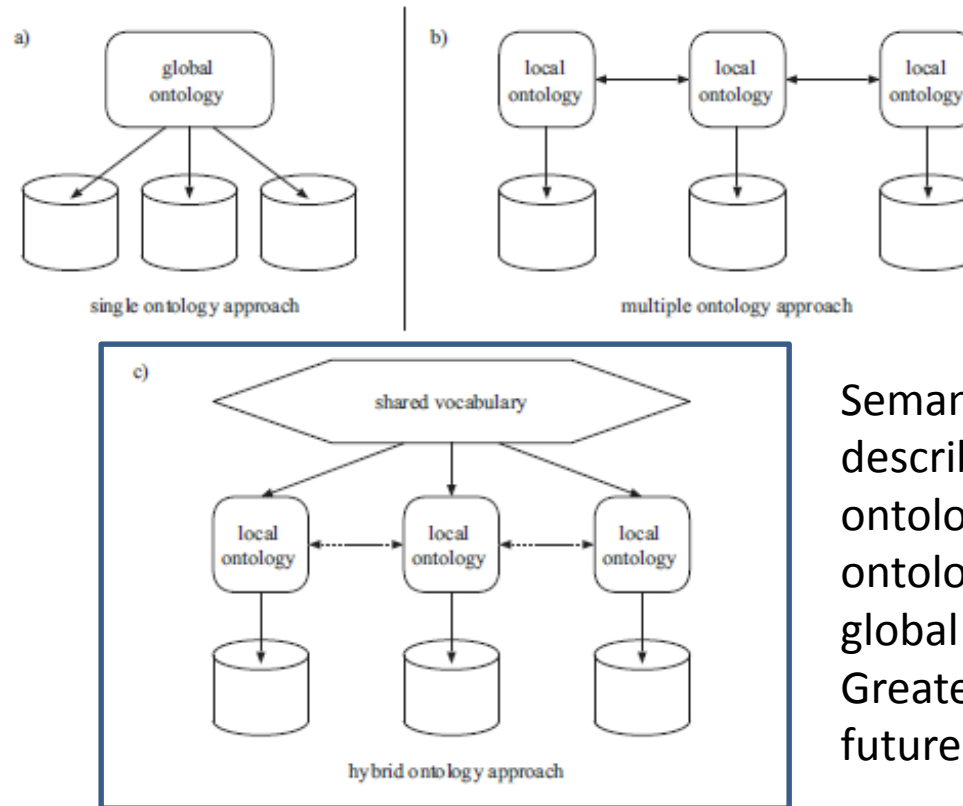

# 'Stove-piped' Collections and Research Programs

# Ontology-Based Data Integration

Semantics of each source described by its own ontology, but source ontologies built upon one global shared vocabulary. Greatest flexibility for future expansion.

Figure 1: The three possible ways for using ontologies for content explication

# Building Source Ontologies

- Files built in RDF and/or OWL and shared over the web.
- Ontologies would be built for describing and integrating taxonomy, natural history objects, ecological associations (e.g., functional feeding groups) and environmental associations.
- Would integrate the ontologies with databasing platforms (e.g., Specify, Symbiota).

# Efficiencies

- Fish collections largely digitized, databased, networked ([www.fishnet2.net](http://www.fishnet2.net)).

- Project will take advantage of technology/experience gained from digitizing/networking/collaboratively georeferencing U.S. fish collections.

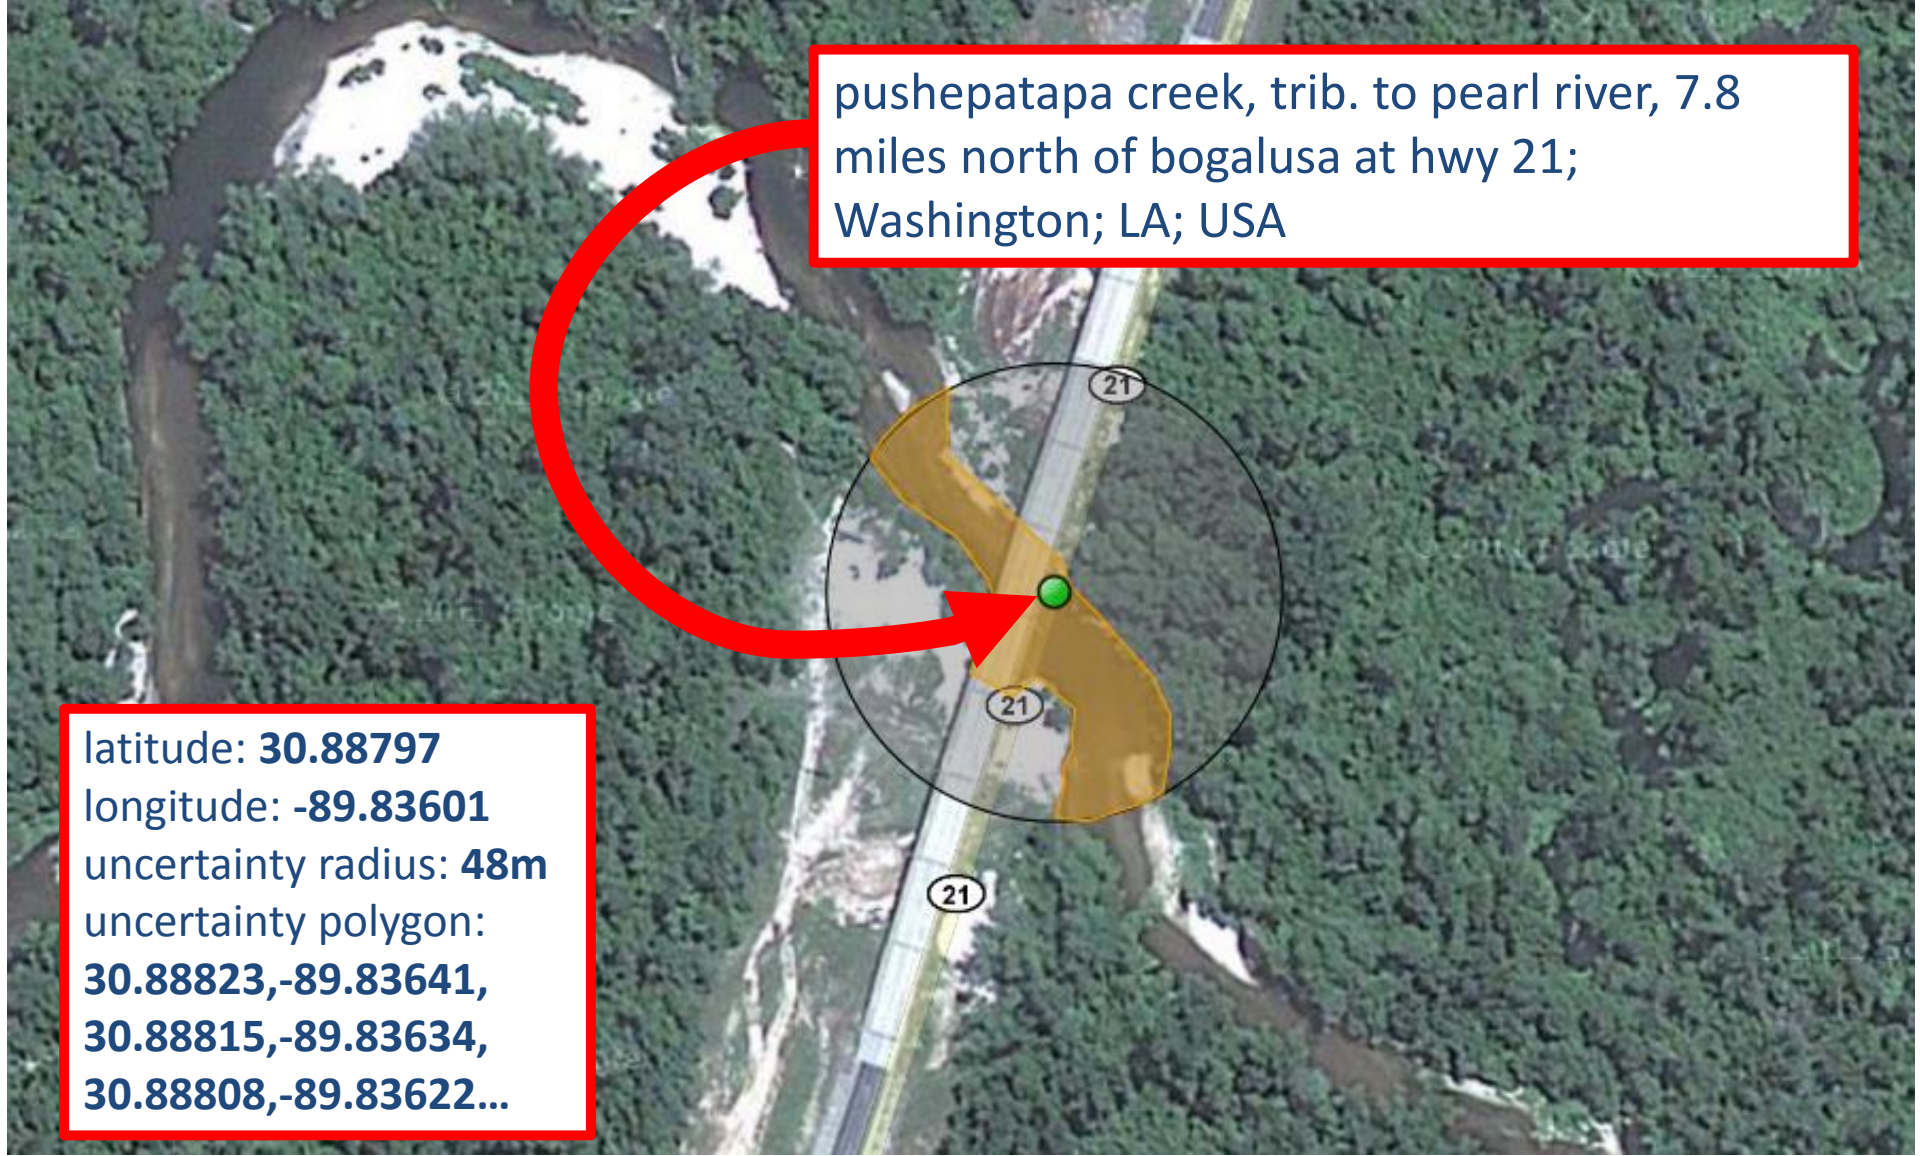

# Georeferencing Natural History Collections Data: The GEOLocate Project

Nelson E. Rios

# What is Georeferencing

An aerial satellite image showing a river on the left and a highway (Hwy 21) running vertically on the right. A yellow shaded area highlights a specific location on the highway. A green dot is placed within this area, and a red arrow points from a text box above to this dot. A black circle is drawn around the yellow area. The text box above contains location information: 'pushepatapa creek, trib. to pearl river, 7.8 miles north of bogalusa at hwy 21; Washington; LA; USA'.

pushepatapa creek, trib. to pearl river, 7.8 miles north of bogalusa at hwy 21; Washington; LA; USA

## GEOLocate: Community Edition

Welcome to the Tulane University Museum of Natural History's Community Edition of GEOLocate. This site along with [GEOLocate](#) (version 3 and higher) and DiGIR provider software form the foundation of community-based georeferencing, whereby participants form communities and pool data to maximize efficiency of georeferencing.

Beta testing is now open, so if you are interested in using our software and services for collaborative georeferencing please follow the registration link below. After personal review of your registration information, you will be granted access to the system. Questions or comments may be directed to [Nelson Rios](#)

[Registration](#) is free and gives you access to restricted areas of this portal, where you can join or create a community. [Read more about us.](#)

# Georeferencing Communities

Communities List   Create Communities   Join Communities   Account Settings

Fill out the form below to create a new community.

Fields marked \* are required.

Community name:  \*

Description:

Georeferencing options:  Water body matching    Look for hwy/river crossing

Privacy setting:  public: any user can join your community.  
 restricted: users send you requests to join your community.  
 private: only users you invite can join your community.

## Create Communities

## Data Sources

Data Sources   Members   Com Center   Settings

Data source management operations

- Add new community data source via DiGIR
- Add new community data source via CSV files

Use this easy signup link to send a auto-join invite to users:

Enable hyperlinks on data source records:  
base link format: "http://domain.com?<key>=" where <key> is a parameter key of your choice.

## Add New Users & Link Out

Data Sources Members Com Center Settings

User management operations:

- Define users working dataset
- Change users community access levels
- Invite users to this community

To define a working dataset, select the search parameters and users below, then click "SUBMIT CHANGES".

Use [CTRL]+click to select multiple.

Search Criteria

Community data sources:

--ALL--

# Leveraging CoGe Process and System for Georeferencing Efficiency

- Beyond efficiencies of the locality matching system, Fishnet2 localities are a useful resource for georeferencing invertebrate collection localities.
- 149,642 localities currently in Fishnet2 in 18 states considered here as part of SE region.
- Many of these are replicates, and many are same places invertebrates have been collected.

## Fish-Crayfish Locality Comparison

- Compared dataset of 2892 georeferenced crayfish localities from Crayfishes of Alabama project to 2063 georeferenced Alabama fish localities in Fishnet2
- Buffered lat/long by 90 meters to account for error in coordinate determinations (~ 3 seconds).
- 504 localities (18%) overlapped (were the same).

# Proposal Development Plan

- Identify PIs and develop workflows for digitizing various preparations of specimens.
- Decide on digitization approach and perform task analyses/time trials.
- Develop project implementation plan.
- Develop budgets.
- Hopefully submit in October 2013.

**Thanks for your attention!**
